

Warm Season Turf Program

- ◆ Warm Season Round One – *Late January through March*
 - Our first visit promotes control of existing winter annual weeds. Application consists of pre-emerge weed control for annual grasses and broadleaf weeds, and post-emerge weed control of existing winter annual weeds.

- ◆ Warm Season Round Two - *March through April*
 - Our second visit continues control of existing winter annual weeds. Application consists of pre-emerge weed control for annual grasses and broadleaf weeds, and post-emerge weed control of existing winter annual weeds.

- ◆ Warm Season Round Three – *April - June*
 - This third visit maintains color and provides consistent growth throughout the summer. Application consists of fertilizer to promote rapid green-up of turf and post-emerge weed control as necessary.

- ◆ Warm Season Round Four – *Late June -August*
 - Our fourth visit promotes continued control of summer broadleaf and grassy weeds to allow your lawn to flourish and maintain its color throughout the growing season.

- ◆ Warm Season Round Five – *August - September*
 - Our fifth visit will maintain color and promote growth into the early fall. Application consists of fertilizer and post-emerge weed control as necessary.

- ◆ Warm Season Round Six – *Mid-September - October*
 - The sixth visit in this program is an application of fertilizer containing nitrogen, phosphorus and potassium to maintain color throughout the fall as well as post-emerge weed control as necessary.

- ◆ Warm Season Round Seven – *November - December*
 - This final application of the year prepares your lawn for winter with an application post-emerge weed control of remaining fall annual weeds.
