

Good Neighbor Basic Program Cool Season Turf

- ◆ Good Neighbor Round One – *Late January through March*
 - Our first visit promotes control of existing winter annual weeds and enhances lawn color. Application consists of pre-emerge weed control for broadleaf weeds as well as a light fertilizer to help give a greener turf.

- ◆ Good Neighbor Round Two - *March through April*
 - Our second application contains post-emerge weed control. This lawn care application controls broadleaf weeds throughout the lawn.

- ◆ Good Neighbor Round Three – *Mid-March through April*
 - Our third visit promotes continued control of existing annual weeds, additionally we will be applying pre-emerge weed control for broadleaf weeds and a slow release fertilizer that will help keep the lawn green throughout the warmer months.

- ◆ Good Neighbor Round Four – *Mid June through July*
 - Our fourth round continues our treatment of your summer annual broadleaf and grassy weeds.

- ◆ Good Neighbor Round Five - *Mid August through September*
 - Round five is important for the continued growth and color of your cool season turf. On this round we apply a complete fertilizer coupled with Humate. As a chelating agent, Humate helps release the tied up nutrients from the soil. When Humate is applied, less fertilizer and less water are needed. It also improves overall plant health.

- ◆ Good Neighbor Round Six - *Mid September through October*
 - Round six completes our fall application of fertilizer and continues our treatment of post-emerge broadleaf and grassy weeds.

- ◆ Good Neighbor Round Seven - *November through December*
 - The seventh round is our final round of the year and we apply post-emerge weed control to help control winter annuals, so that your turf will fill in early in the spring.
